Xtreme Power Announces World's Smallest Lithium-ion UPS with Output Power Control to Reboot Locked-up devices

Denver, CO, June 8, 2020 – Xtreme Power Conversion, the innovation leader in UPS technology, announced today the availability of their J60 600VA lithium-ion UPS. At about a third of the size of a conventional UPS, the J60 fits in space limited automation, audio-visual, POS, and kiosk systems applications where a typical UPS will not fit. In addition, the J60-600's output power control feature remotely reboots power to locked-up devices, eliminating truck rolls

The J60 is now available in 600VA and 350VA models. Both provide the advantages of Lithium-ion battery technology; ten year service life, temperature resilience, and fast battery recharge.

Included in the J60-600 model is a redundant battery management system enhancing safety and passing the most stringent single point failure test required by UL-2054.

Additional options include Network Web/SNMP card and Environmental Monitoring that integrate with the J60-600 UPS to provide IP-enabled monitoring and receptacle control.

All J60 UPS models include a full 5-year warranty covering electronics and batteries, within the USA & Canada. Both 120VAC UL and 230VAC CE models are available.

Founded in 2006, XPC Corporation is dedicated to providing innovative power protection solutions for critical applications. XPC manufactures Uninterruptible Power Systems from 350VA to 140kVA and power distribution units for OEM and distribution customers. Headquartered in Denver, CO, customer support center in Necedah, WI and distribution locations across the U.S.A. and Europe.
